GeoGripX

Resin bonded decorative surfacing

The modern approach to paving

GeoGripX

Resin Bonded Decorative Surfacing

GeoGripX is a resin binder system which, when used in conjunction with selected aggregates, provides a complete resin bonded surfacing system, sometimes referred to as “scatter coat”, “broadcast” or “coat” systems.

GeoGripX has been developed to provide an attractive, highly durable surface. It is often used in prestige developments to give a “luxury” feel and the range of aggregate colours and installation method allows the introduction of attractive design elements into landscaping and refurbishment projects.

See Application Video Guide - www.CompleteStreetsUSA/video

Areas of use:

- Driveways
- Footpaths
- Heritage & Conservation Areas
- Roads
- Property Developments
- Parks, Gardens & Leisure Areas
- Urban Landscaping
- Cycleways
- Parking lots
- Pedestrianisation Schemes

Features and Benefits:

- Produces stunning surfaces
- Highly durable
- Flexible, even at low temperatures
- Neutral resin colour enhances the appearance of the aggregate dressing
- Solvent-free
- Odour free during and after application
- Suitable for solid, even and crack-free asphalt and concrete substrates
- Perfect for harmony with the existing environment
- Equally suited to lightly trafficked and pedestrian areas
- Easily cleaned
- Superb range of aggregates available

GeoGripX Aggregates

Danish Quartz

Suitable for light to medium traffic

Chinese Buff Bauxite

Version suitable for pedestrian
Version suitable for heavy traffic

Golden Pea

Suitable for light to medium traffic

Green Granite

Version suitable for pedestrian
Version suitable for heavy traffic

Chinese Grey Bauxite

Version suitable for pedestrian
Version suitable for heavy traffic

Red Granite

Version suitable for pedestrian
Version suitable for heavy traffic

Sterling Silver

Suitable for pedestrian

Guyanan Bauxite

Version suitable for pedestrian
Version suitable for heavy traffic

Every care has been taken to provide an accurate representation of the colour of our products. Aggregates are natural materials which are subject to changes in appearance and colour.

GLAZE COATS

Adding a glaze coat to a resin surface has many benefits including enhancing the colours of the aggregate (resin bonded) and revitalising the glossy appearance of the surface (resin bound). Adding a glaze coat also protects the surface from fungal, algae and weed growth.

- Fast-curing
- Easy roller application
- Protects from staining
- Effective after just one coat
- Enhances surface strength
- Durable
- UV resistant

ADGLAZE

Glaze Coat for resin bonded aggregate surfaces

AdGlaze is a highly effective 2 part solvent-based glaze coat for protecting resin bonded aggregate surfacing. AdGlaze makes cleaning easier and provides resistance to fading and staining. When used over resin bonded aggregate surfaces it also helps restrict aggregate loss.

VOID FILLER

Void Filler is a cement based crack filling system that is used to regulate an uneven substrate in preparation for the application of a resin bonded paving system. It is strong, has good adhesion and is easy to apply to most commonly encountered surfaces.

For resin bonded surfacing, the texture depth of the surface has a direct bearing on the quantity of resin required to bond aggregate particles to the substrate. Every 1 mm of texture depth in the substrate requires an additional 1 litre of resin per square metre simply to fill the texture before a film suitable for the adhesion of aggregate can be achieved.

- Regulates and standardises substrate
- Binds and seals open-textured substrates
- Can be used to smooth, rough tamped concrete and textured asphalt
- Cost-effective
- Suitable for asphalt, macadam and concrete surfaces
- Supplied in kit form – no guess work over quantities to be dosed
- Excellent adhesion
